

Aufgabe 1

a

$$\alpha h_w \leq h_w + 6$$

$$\text{Worst Case } h_w = h_w + 3$$

$$\Rightarrow \alpha (h_w + 3) \leq \alpha h_w + 6$$

$$\alpha h_w + \alpha 3 \leq \alpha h_w + 6$$

$$\alpha 3 \leq 6$$

$$\alpha \leq 2$$

$$w_d = \begin{cases} h_v - h_w \leq 3(a) \\ h_v - h_w \leq 2(b) \end{cases} \quad \alpha * h_v \leq \alpha * h_w + c$$

$$\alpha * (h_w + d) \leq \alpha * h_w + c$$

$$\alpha * h_w + \alpha * d \leq \alpha * h_w + c$$

$$\alpha * d \leq c$$

$$\alpha \leq \frac{c}{d}$$

$$\Rightarrow \alpha = \begin{cases} 2(a) \\ 3(b) \end{cases}$$
